

## 1. COURSE

CS211. Theory of Computation (Mandatory)

## 2. GENERAL INFORMATION

2.1 Credits	:	4
2.2 Theory Hours	:	2 (Weekly)
2.3 Practice Hours	:	2 (Weekly)
2.4 Duration of the period	:	16 weeks
2.5 Type of course	:	Mandatory
2.6 Modality	:	■FaceToFace■
2.7 Prerequisites	:	CS1D2. Discrete Structures II. (2 <sup>nd</sup> Sem)

## 3. PROFESSORS

Meetings after coordination with the professor

## 4. INTRODUCTION TO THE COURSE

This course emphasizes formal languages, computer models and computability, as well as the fundamentals of computational complexity and complete NP problems.

## 5. GOALS

- That the student learn the fundamental concepts of the theory of formal languages.

## 6. COMPETENCES

- 1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (**Assessment**)
- 6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (**Assessment**)

## 7. SPECIFIC COMPETENCES

Nospecificoutcomes

## 8. TOPICS

Unit 1: Basic Automata Computability and Complexity (20)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Finite-state machines</li> <li>• Regular expressions</li> <li>• The halting problem</li> <li>• Context-free grammars</li> <li>• Introduction to the P and NP classes and the P vs. NP problem</li> <li>• Introduction to the NP-complete class and exemplary NP-complete problems (e.g., SAT, Knapsack)</li> <li>• Turing machines, or an equivalent formal model of universal computation</li> <li>• Nondeterministic Turing machines</li> <li>• Chomsky hierarchy</li> <li>• The Church-Turing thesis</li> <li>• Computability</li> <li>• Rice's Theorem</li> <li>• Examples of uncomputable functions</li> <li>• Implications of uncomputability</li> </ul>	<ul style="list-style-type: none"> <li>• Discuss the concept of finite state machines [Assessment]</li> <li>• Design a deterministic finite state machine to accept a specified language [Assessment]</li> <li>• Generate a regular expression to represent a specified language [Assessment]</li> <li>• Explain why the halting problem has no algorithmic solution [Assessment]</li> <li>• Design a context-free grammar to represent a specified language [Assessment]</li> <li>• Define the classes P and NP [Assessment]</li> <li>• Explain the significance of NP-completeness [Assessment]</li> <li>• Explain the Church-Turing thesis and its significance [Familiarity]</li> <li>• Explain Rice's Theorem and its significance [Familiarity]</li> <li>• Provide examples of uncomputable functions [Familiarity]</li> <li>• Prove that a problem is uncomputable by reducing a classic known uncomputable problem to it [Familiarity]</li> </ul>
Readings : [Jmartin10], [Linz11], [Sip12]	

Unit 2: Advanced Computational Complexity (20)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Review of the classes P and NP; introduce P-space and EXP</li> <li>• Polynomial hierarchy</li> <li>• NP-completeness (Cook's theorem)</li> <li>• Classic NP-complete problems</li> <li>• Reduction Techniques</li> </ul>	<ul style="list-style-type: none"> <li>• Define the classes P and NP (Also appears in AL/Basic Automata, Computability, and Complexity) [Assessment]</li> <li>• Define the P-space class and its relation to the EXP class [Assessment]</li> <li>• Explain the significance of NP-completeness (Also appears in AL/Basic Automata, Computability, and Complexity) [Assessment]</li> <li>• Provide examples of classic NP-complete problems [Assessment]</li> <li>• Prove that a problem is NP-complete by reducing a classic known NP-complete problem to it [Assessment]</li> </ul>
Readings : [Jmartin10], [Linz11], [Sip12], [Hopcroft93]	

Unit 3: Advanced Automata Theory and Computability (20)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Sets and languages               <ul style="list-style-type: none"> <li>– Regular languages</li> <li>– Review of deterministic finite automata (DFAs)</li> <li>– Nondeterministic finite automata (NFAs)</li> <li>– Equivalence of DFAs and NFAs</li> <li>– Review of regular expressions; their equivalence to finite automata</li> <li>– Closure properties</li> <li>– Proving languages non-regular, via the pumping lemma or alternative means</li> </ul> </li> <li>• Context-free languages               <ul style="list-style-type: none"> <li>– Push-down automata (PDAs)</li> <li>– Relationship of PDAs and context-free grammars</li> <li>– Properties of context-free languages</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Determine a language’s place in the Chomsky hierarchy (regular, context-free, recursively enumerable) [Assessment]</li> <li>• Convert among equivalently powerful notations for a language, including among DFAs, NFAs, and regular expressions, and between PDAs and CFGs [Assessment]</li> </ul>
Readings : [Hopcroft93], [Bro93]	

## 9. WORKPLAN

### 9.1 Methodology

Individual and team participation is encouraged to present their ideas, motivating them with additional points in the different stages of the course evaluation.

### 9.2 Theory Sessions

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

### 9.3 Practical Sessions

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

## 10. EVALUATION SYSTEM

\*\*\*\*\* EVALUATION MISSING \*\*\*\*\*
