San Pablo Catholic University (UCSP) Undergraduate Program in Computer Science SILABO

CS112. Computer Science I (Mandatory)

2. Professors

Universidad Católica

Lecturer

- Alvaro Henry Mamani-Aliaga <ahmamani@ucsp.edu.pe>
 - PhD in Ciencia de la Computación, UNSA, Perú, 2019.
 - MSc in Ciencia de la Computación, IME-USP, Brasil, 2011.
- Manuel Loaiza Fernandez <meloaiza@ucsp.edu.pe>
 - PhD in Informatica, Pontificia Universidad Católica do Rio de Janeiro (PUC-RIO), Brasil, 2009.
 - MSc in Informatica, Pontificia Universidad Católica do Rio de Janeiro (PUC-RIO), Brasil, 2005.

3. Course foundation

This is the second course in the sequence of introductory courses in computer science. The course will introduce students in the various topics of the area of computing such as: Algorithms, Data Structures, Software Engineering, etc.

4. Summary

General overwiew of Programming Languages 2. Virtual Machines 3. Basic Type Systems 4. Fundamental Programming Concepts 5. Object-Oriented Programming 6. Algorithms and Design 7. Algorithmic Strategies 8. Basic Analysis 9. Fundamental Data Structures and Algorithms

5. Generales Goals

• Introduce the student to the foundations of the object orientation paradigm, allowing the assimilation of concepts necessary to develop information systems.

6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

- 1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (Assessment)
- 2) Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline. (Assessment)
- 5) Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline. (Familiarity)
- 6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (Usage)

7. Content

oals s the historical context for several program
10
anguage paradigms [Familiarity]

UNIT 2: Virtual Machines (1)

Explain the concept of virtual memory and how it is
ealized in hardware and software [Familiarity] Differentiate emulation and isolation [Familiarity] Evaluate virtualization trade-offs [Assessment]

ompetences: ontent	Generales Goals
 A type as a set of values together with a set of operations Primitive types (e.g., numbers, Booleans) Compound types built from other types (e.g., records, unions, arrays, lists, functions, references) Model statement (link, visibility, scope and life time). General view of type checking. 	 For both a primitive and a compound type, infomally describe the values that have that type [Fmiliarity] For a language with a static type system, describe the operations that are forbidden statically, such a passing the wrong type of value to a function of method [Familiarity] Describe examples of program errors detected by type system [Familiarity] For multiple programming languages, identify prigram properties checked statically and program properties checked dynamically [Usage] Give an example program that does not type-cheer in a particular language and yet would have no error if run [Familiarity] Use types and type-error messages to write and d bug programs [Usage] Explain how typing rules define the set of operation that are legal for a type [Familiarity] Write down the type rules governing the use of particular compound type [Usage] Explain why undecidability requires type systems is conservatively approximate program behavior [Fimiliarity] Define and use program pieces (such as function classes, methods) that use generic types, includin for collections [Usage] Discuss the differences among generics, subtypin and overloading [Familiarity] Explain multiple benefits and limitations of stat typing in writing, maintaining, and debugging sof ware [Familiarity]

Competences:	
lontent	Generales Goals
 Basic syntax and semantics of a higher-level language Variables and primitive data types (e.g., numbers, characters, Booleans) Expressions and assingments Simple I/O including file I/O Conditional and iterative control structures Functions and parameter passing 	 Analyze and explain the behavior of simple program involving the fundamental programming construct variables, expressions, assignments, I/O, control cor structs, functions, parameter passing, and recursion [Assessment] Identify and describe uses of primitive data type [Familiarity] Write programs that use primitive data types [Usage Modify and expand short programs that use star dard conditional and iterative control structures an functions [Usage] Design, implement, test, and debug a program that uses each of the following fundamental programmin constructs: basic computation, simple I/O, standar conditional and iterative structures, the definition of functions, and parameter passing [Usage] Write a program that uses file I/O to provide persist tence across multiple executions [Usage] Choose appropriate conditional and iteration cor structs for a given programming task [Assessment] Describe the concept of recursion and give example of its use [Familiarity] Identify the base case and the general case of recursively-defined problem [Assessment]

Competences:	
Content	Generales Goals
• Object-oriented design	• Design and implement a class [Usage]
 Decomposition into objects carrying state and having behavior Class-hierarchy design for modeling 	• Use subclassing to design simple class hierarchi that allow code to be reused for distinct subclass [Usage]
 Object-oriented idioms for encapsulation Privacy and visibility of class members Interfaces revealing only method signatures Abstract base classes Definition of classes: fields, methods, and constructors Subclasses, inheritance, and method overriding Subtyping Subtype polymorphism; implicit upcasts in typed languages Notion of behavioral replacement: subtypes acting like supertypes Relationship between subtyping and inheritance Using collection classes, iterators, and other common library components Dynamic dispatch: definition of method-call 	 Correctly reason about control flow in a program using dynamic dispatch [Usage] Compare and contrast (1) the procedural/function approach—defining a function for each operation with the function body providing a case of each data variant—and (2) the object-oriented a proach—defining a class for each data variant with the class definition providing a method for each operation Understand both as defining a matrix of operations and variants [Assessment] Explain the relationship between object-oriented if heritance (code-sharing and overriding) and subtying (the idea of a subtype being usable in a content that expects the supertype) [Familiarity] Use object-oriented encapsulation mechanisms su as interfaces and private members [Usage] Define and use iterators and other operations on a gregates, including operations that take functions arguments, in multiple programming languages, s lecting the most natural idioms for each langua [Usage]

competences:	
ontent	Generales Goals
 Problem-solving strategies Iterative and recursive mathematical functions Iterative and recursive traversal of data structures Divide-and-conquer strategies The role of algorithms in the problem-solving process Problem-solving strategies Iterative and recursive mathematical functions Iterative and recursive traversal of data structures Divide-and-conquer strategies Fundamental design concepts and principles Abstraction Program decomposition Encapsulation and information hiding Separation of behaivor and implementation 	 Discuss the importance of algorithms in the problet solving process [Familiarity] Discuss how a problem may be solved by multipalgorithms, each with different properties [Familiarity] Create algorithms for solving simple problems [Uage] Use a programming language to implement, test, a debug algorithms for solving simple problems [Usage] Implement, test, and debug simple recursive functions and procedures [Usage] Determine whether a recursive or iterative soluting is most appropriate for a problem [Assessment] Implement a divide-and-conquer algorithm for solving a problem [Usage] Apply the techniques of decomposition to break program into smaller pieces [Usage] Identify the data components and behaviors of m tiple abstract data types [Usage] Implement a coherent abstract data type, with loc coupling between components and behaviors [Usage] Identify the relative strengths and weaknesses amo multiple designs or implementations for a problem [Assessment]

Competences:	
Content	Generales Goals
 Brute-force algorithms Greedy algorithms Divide-and-conquer Recursive backtracking Dynamic Programming 	 For each of the strategies (brute-force, greed; divide-and-conquer, recursive backtracking, and dy namic programming), identify a practical example t which it would apply [Familiarity] Use a greedy approach to solve an appropriate problem and determine if the greedy rule chosen leads t an optimal solution [Assessment] Use a divide-and-conquer algorithm to solve an appropriate problem [Usage] Use recursive backtracking to solve a problem suct as navigating a maze [Usage] Use dynamic programming to solve an appropriate problem [Usage] Determine an appropriate algorithmic approach to problem [Assessment] Describe various heuristic problem-solving method [Familiarity]

UNIT 8: Basic Analysis (2)

Competences:	
Content	Generales Goals
• Differences among best, expected, and worst case behaviors of an algorithm	• Explain what is meant by "best", "expected", and "worst" case behavior of an algorithm [Familiarity]
Readings: Stroustrup2013, Deitel17	I

8. Methodology

- 1. El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.
- 2. El profesor del curso presentará demostraciones para fundamentar clases teóricas.
- 3. El profesor y los alumnos realizarán prácticas
- 4. Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

9. Assessment Theory Sessions:

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

Practical Sessions:

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

Evaluation System:

The final grade is obtained through of:

CONTINUOUS ASSESMENT	EVALUATIONS
Continuous assessment 1 : 20 %	Midterm Exam : 20 %
Continuous assessment 2 : 40 $\%$	Final Exam : 20 %
60%	40%

Where:

Continuous Assessment: It includes group work, active participation in class, exercise test.

- Continuos assessment 1 (weeks 1 9)
- Continuos assessment 2 (weeks 10 17)

To pass the course you must obtain 11.5 or more in the final grade .
