San Pablo Catholic University (UCSP) **Undergraduate Program in Computer Science** SILABO

CS292. Software Engineering II (Mandatory)

2. Professors

Lecturer

- Guillermo Enrique Calderón Ruiz <gcalderon@ucsp.edu.pe>
 - PhD in Ciencias de la Ingeniería, Pontificia Universidad Católica de Chile, Chile, 2011.
 - MSc in Ingeniería, Pontificia Universidad Católica de Chile, Chile, 2010.

3. Course foundation

The topics of this course extend the ideas of software design and development from the introduction sequence to programming to encompass the problems encountered in large-scale projects. It is a broader and more complete view of Software Engineering appreciated from a Project point of view.

4. Summary

1. Tools and Environments 2. Software Verification and Validation 3. Software Evolution 4. Software Project Management

5. Generales Goals

- Enable students to be part of and define software development teams facing real-world problems.
- familiarize the students with the process of administering a software project in such a way as to be able to create, improve and use tools and metrics that allow them to carry out the estimation and monitoring of a software project
- Create, evaluate and execute a test plan for medium-sized code segments, Distinguish between different types of tests, lay the foundation for creating, improve test procedures and tools for these purposes
- Select with justification an appropriate set of tools to support the development of a range of software products.
- Create, improve and use existing patterns for software maintenance. Disclose features and design patterns for software reuse.
- Identify and discuss different specialized systems, create, improve and use specialized standards for the design, implementation, maintenance and testing of specialized systems.

6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

- 1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (Usage)
- 2) Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline. (Usage)
- 3) Communicate effectively in a variety of professional contexts. (Usage)
- 6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (Assessment)

7. Content

UNIT 1: Tools and Environments (12)		
Competences:		
Content	Generales Goals	
 Software configuration management and version control Release management Requierements analysis and desing modeling tools Testing tools including static and dynamic analysis tools Programming environments that automate parts of program construction pocesses (e.g., automated builds) Continuous integration Tool integration concepts and mechanisms 	 Software configuration management and version control [Usage] Release management [Usage] Requierements analysis and desing modeling tools [Usage] Testing tools including static and dynamic analysis tools [Usage] Programming environments that automate parts of program construction pocesses (e.g., automated builds) Continuous integration [Usage] Tool integration concepts and mechanisms [Usage] 	
Readings: Pressman (2004), Blum (1992), Schach (2004)	, Wang and King (2000), Keyes (2004), Windle and	
Abreo (2002), Priest and Sanchez (2001), Schach (2004), Montangero (1996), Ambriola (2001), Conradi (2000),		
Oquendo (2003)		

UNIT 3: Software Evolution (12)		
Competences:		
Content	Generales Goals	
 Software development in the context of large, pre- existing code bases Software change Concerns and concernlocation Refactoring Software evolution Characteristics of maintainable software Reengineering systems Software reuse Code segments Libraries and frameworks Components Product lines 	 Identify the principal issues associated with software evolution and explain their impact on the software lifecycle [Usage] Estimate the impact of a change request to an existing product of medium size [Usage] Use refactoring in the process of modifying a software component [Usage] Discuss the challenges of evolving systems in a changing environment [Usage] Outline the process of regression testing and its role in release management [Usage] Discuss the advantages and disadvantages of different types of software reuse [Usage] 	
Readings: Pressman (2004), Blum (1992), Schach (2004), Wang and King (2000), Keyes (2004), Windle and		
Abreo (2002), Priest and Sanchez (2001), Schach (2004), Montangero (1996), Ambriola (2001), Conradi (2000),		
Oquendo (2003)		

Competences:		
ontent	Generales Goals	
 Team participation Team processes including responsabilities for task, meeting structure, and work schedule Roles and responsabilities in a software team Team conflict resolution Risks associated with virtual teams (communication, perception, structure) Effort estimation (at the personal level) Risk The role of risk in the lifecycle Risk categories including security, safety, market, financial, technology, people, quality, structure and process Team management Team organization and decision-making Role identification and assigment Individual and team performance assessment Project management tools Cost/benefit analysis 	 Discuss common behaviors that contribute to the effective functioning of a team [Usage] Create and follow an agenda for a team meeting [Usage] Identify and justify necessary roles in a software development team [Usage] Understand the sources, hazards, and potential benefits of team conflict [Usage] Apply a conflict resolution strategy in a team setting [Usage] Use an ad hoc method to estimate software development effort (eg, time) and compare to actual effort required [Usage] List several examples of software risks [Usage] Describe the impact of risk in a software development lifecycle [Usage] Describe different categories of risk in software systems [Usage] Demonstrate through involvement in a team project the central elements of team building and team man agement [Usage] 	
 Software quality assurance and the role of measurements 		
• Risk		
 Risk identification and management Risk analysis and evaluation Risk tolerance (e.g., risk-adverse, risk-neutral, risk-seeking) Risk planning System-wide approach to risk including hazards associated with tools 		

8. Methodology

1. El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.

2. El profesor del curso presentará demostraciones para fundamentar clases teóricas.

- 3. El profesor y los alumnos realizarán prácticas
- 4. Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

9. Assessment Theory Sessions:

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

Practical Sessions:

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

Evaluation System:

The final grade is obtained through of:

CONTINUOUS ASSESMENT	EVALUATIONS
Continuous assessment 1 : 30 %	Midterm Exam : 20%
Continuous assessment 2 : 30 %	Final Exam : 20%
60%	40%

Where:

Continuous Assessment: It includes group work, active participation in class, exercise test.

- Continuos assessment 1 (weeks 1 9)
- Continuos assessment 2 (weeks 10 17)

To pass the course you must obtain 11.5 or more in the final grade .
