

# National University of Engineering (UNI)

School of Computer Science Sillabus 2023-I

## 1. COURSE

CS112. Computer Science I (Mandatory)

2. GENERAL INFORMATION						
2.1 Course	:	CS112. Computer Science	Ι			
2.2 Semester	:	$2^{do}$ Semestre.				
2.3 Credits	:	5				
2.4 Horas	:	2 HT; 6 HP;				
2.5 Duration of the period	:	16 weeks				
2.6 Type of course	:	Mandatory				
2.7 Learning modality	:	Blended				
2.8 Prerrequisites	:	CS111.	Computing	Foundations.	$(1^{st}$	Sem)
		CS111. Computing Found	ations. $(1^{st} \text{ Sem})$			

## 3. PROFESSORS

Meetings after coordination with the professor

#### 4. INTRODUCTION TO THE COURSE

This is the second course in the sequence of introductory courses in computer science. The course will introduce students in the various topics of the area of computing such as: Algorithms, Data Structures, Software Engineering, etc.

#### 5. GOALS

• Introduce the student to the foundations of the object orientation paradigm, allowing the assimilation of concepts necessary to develop information systems.

## 6. COMPETENCES

- 1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (Assessment)
- 2) Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline. (Assessment)
- 5) Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline. (Familiarity)
- 6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (Usage)

# 7. TOPICS

omes
the historical context for several program guage paradigms [Familiarity]

Unit 2: Virtual Machines (1) Competences Expected:	
Topics	Learning Outcomes
<ul> <li>The virtual machine concept.</li> <li>Types of virtualization (including Hardware/Software, OS, Server, Service, Network).</li> <li>Intermediate languages.</li> </ul>	<ul> <li>Explain the concept of virtual memory and how it is realized in hardware and software [Familiarity]</li> <li>Differentiate emulation and isolation [Familiarity]</li> <li>Evaluate virtualization trade-offs [Assessment]</li> </ul>
Readings : [Stroustrup2013], [Deitel17]	I

ppics	Learning Outcomes
<ul> <li>ompetences Expected:</li> <li>opics</li> <li>A type as a set of values together with a set of operations <ul> <li>Primitive types (e.g., numbers, Booleans)</li> <li>Compound types built from other types (e.g., records, unions, arrays, lists, functions, references)</li> </ul> </li> <li>Model statement (link, visibility, scope and life time).</li> <li>General view of type checking.</li> </ul>	<ul> <li>Learning Outcomes</li> <li>For both a primitive and a compound type, informally describe the values that have that type [F miliarity]</li> <li>For a language with a static type system, describt the operations that are forbidden statically, such passing the wrong type of value to a function method [Familiarity]</li> <li>Describe examples of program errors detected by type system [Familiarity]</li> <li>For multiple programming languages, identify pr gram properties checked statically and program properties checked dynamically [Usage]</li> <li>Give an example program that does not type-checking a particular language and yet would have no error if run [Familiarity]</li> <li>Use types and type-error messages to write and d bug programs [Usage]</li> <li>Explain how typing rules define the set of operation</li> </ul>
	<ul> <li>that are legal for a type [Familiarity]</li> <li>Write down the type rules governing the use of particular compound type [Usage]</li> <li>Explain why undecidability requires type systems conservatively approximate program behavior [F miliarity]</li> <li>Define and use program pieces (such as function classes, methods) that use generic types, includin for collections [Usage]</li> <li>Discuss the differences among generics, subtypin and overloading [Familiarity]</li> </ul>
	• Explain multiple benefits and limitations of stat typing in writing, maintaining, and debugging sol ware [Familiarity]

Competences Expected:		
Topics	Learning Outcomes	
<ul> <li>Basic syntax and semantics of a higher-level language</li> <li>Variables and primitive data types (e.g., numbers, characters, Booleans)</li> <li>Expressions and assingments</li> <li>Simple I/O including file I/O</li> <li>Conditional and iterative control structures</li> <li>Functions and parameter passing</li> </ul>	<ul> <li>Analyze and explain the behavior of simple program involving the fundamental programming construct variables, expressions, assignments, I/O, control constructs, functions, parameter passing, and recursion [Assessment]</li> <li>Identify and describe uses of primitive data type [Familiarity]</li> <li>Write programs that use primitive data types [Usage</li> <li>Modify and expand short programs that use star dard conditional and iterative control structures an functions [Usage]</li> <li>Design, implement, test, and debug a program that uses each of the following fundamental programmin constructs: basic computation, simple I/O, standar conditional and iterative structures, the definition of functions, and parameter passing [Usage]</li> <li>Write a program that uses file I/O to provide persist tence across multiple executions [Usage]</li> <li>Choose appropriate conditional and iteration constructs for a given programming task [Assessment]</li> <li>Describe the concept of recursion and give example of its use [Familiarity]</li> <li>Identify the base case and the general case of recursively-defined problem [Assessment]</li> </ul>	

Competences Expected:		
opics	Learning Outcomes	
• Object-oriented design	• Design and implement a class [Usage]	
<ul> <li>Decomposition into objects carrying state and having behavior</li> <li>Class-hierarchy design for modeling</li> <li>Object-oriented idioms for encapsulation <ul> <li>Privacy and visibility of class members</li> <li>Interfaces revealing only method signatures</li> <li>Abstract base classes</li> </ul> </li> <li>Definition of classes: fields, methods, and constructors</li> <li>Subclasses, inheritance, and method overriding</li> <li>Subtyping <ul> <li>Subtype polymorphism; implicit upcasts in typed languages</li> <li>Notion of behavioral replacement: subtypes acting like supertypes</li> <li>Relationship between subtyping and inheritance</li> </ul> </li> <li>Using collection classes, iterators, and other common library components</li> </ul>	<ul> <li>Design and implement a class [osage]</li> <li>Use subclassing to design simple class hierarchi that allow code to be reused for distinct subclass [Usage]</li> <li>Correctly reason about control flow in a program using dynamic dispatch [Usage]</li> <li>Compare and contrast (1) the procedural/function approach—defining a function for each operatid with the function body providing a case f each data variant—and (2) the object-oriented a proach—defining a class for each data variant with the class definition providing a method for each o eration Understand both as defining a matrix of o erations and variants [Assessment]</li> <li>Explain the relationship between object-oriented i heritance (code-sharing and overriding) and subty ing (the idea of a subtype being usable in a conter that expects the supertype) [Familiarity]</li> <li>Use object-oriented encapsulation mechanisms survey as interfaces and private members [Usage]</li> <li>Define and use iterators and other operations on a gregates, including operations that take functions arguments, in multiple programming languages, s lecting the most natural idioms for each language</li> </ul>	

Competences Expected:		
Topics	Learning Outcomes	
<ul> <li>Problem-solving strategies</li> <li>Iterative and recursive mathematical functions</li> <li>Iterative and recursive traversal of data structures</li> <li>Divide-and-conquer strategies</li> <li>The role of algorithms in the problem-solving process</li> <li>Problem-solving strategies</li> <li>Iterative and recursive mathematical functions</li> <li>Iterative and recursive traversal of data structures</li> <li>Divide-and-conquer strategies</li> <li>Iterative and recursive traversal of data structures</li> <li>Divide-and-conquer strategies</li> <li>Fundamental design concepts and principles</li> <li>Abstraction</li> <li>Program decomposition</li> <li>Encapsulation and information hiding</li> <li>Separation of behaivor and implementation</li> </ul>	<ul> <li>Discuss the importance of algorithms in the problem solving process [Familiarity]</li> <li>Discuss how a problem may be solved by multipralgorithms, each with different properties [Familiarity]</li> <li>Create algorithms for solving simple problems [Uage]</li> <li>Use a programming language to implement, test, and debug algorithms for solving simple problems [Usage]</li> <li>Implement, test, and debug simple recursive functions and procedures [Usage]</li> <li>Determine whether a recursive or iterative solutions is most appropriate for a problem [Assessment]</li> <li>Implement a divide-and-conquer algorithm for solving a problem [Usage]</li> <li>Apply the techniques of decomposition to break program into smaller pieces [Usage]</li> <li>Identify the data components and behaviors of multiple abstract data types [Usage]</li> <li>Implement a coherent abstract data type, with loo coupling between components and behaviors [Usage]</li> <li>Identify the relative strengths and weaknesses amonimultiple designs or implementations for a problem [Usage]</li> </ul>	

Competences Expected:		
Topics	Learning Outcomes	
<ul> <li>Brute-force algorithms</li> <li>Greedy algorithms</li> <li>Divide-and-conquer</li> <li>Recursive backtracking</li> <li>Dynamic Programming</li> </ul>	<ul> <li>For each of the strategies (brute-force, greedy divide-and-conquer, recursive backtracking, and dy namic programming), identify a practical example t which it would apply [Familiarity]</li> <li>Use a greedy approach to solve an appropriate proh lem and determine if the greedy rule chosen leads t an optimal solution [Assessment]</li> <li>Use a divide-and-conquer algorithm to solve an appropriate problem [Usage]</li> <li>Use recursive backtracking to solve a problem suct as navigating a maze [Usage]</li> <li>Use dynamic programming to solve an appropriate problem [Usage]</li> <li>Determine an appropriate algorithmic approach to problem [Assessment]</li> <li>Describe various heuristic problem-solving method [Familiarity]</li> </ul>	

Unit 8: Basic Analysis (2)         Competences Expected:	
Topics	Learning Outcomes
• Differences among best, expected, and worst case behaviors of an algorithm	• Explain what is meant by "best", "expected", and "worst" case behavior of an algorithm [Familiarity]
Readings : [Stroustrup2013], [Deitel17]	

Competences Expected:		
opics	Learning Outcomes	
<ul> <li>Simple numerical algorithms, such as computing the average of a list of numbers, finding the min, max,</li> <li>Sequential and binary search algorithms</li> <li>Worst case quadratic sorting algorithms (selection, insertion)</li> <li>Worst or average case O(N log N) sorting algorithms (quicksort, heapsort, mergesort)</li> </ul>	<ul> <li>Implement basic numerical algorithms [Usage]</li> <li>Implement simple search algorithms and explain the differences in their time complexities [Assessment]</li> <li>Be able to implement common quadratic and O(I log N) sorting algorithms [Usage]</li> <li>Discuss the runtime and memory efficiency of principal algorithms for sorting, searching, and hashin [Familiarity]</li> <li>Discuss factors other than computational efficience that influence the choice of algorithms, such a programming time, maintainability, and the use of application-specific patterns in the input data [Familiarity]</li> <li>Explain how tree balance affects the efficiency of various binary search tree operations [Familiarity]</li> <li>Demonstrate the ability to evaluate algorithms, to select from a range of possible options, to provid justification for that selection, and to implement the algorithm in a particular context [Assessment]</li> <li>Trace and/or implement a string-matching algorithm [Usage]</li> </ul>	

#### 8. WORKPLAN

#### 8.1 Methodology

Individual and team participation is encouraged to present their ideas, motivating them with additional points in the different stages of the course evaluation.

# 8.2 Theory Sessions

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

## **8.3 Practical Sessions**

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

#### 9. EVALUATION SYSTEM

\*\*\*\*\*\*\*\* EVALUATION MISSING \*\*\*\*\*\*\*
