

Peruvian Computing Society (SPC)  
School of Computer Science  
Syllabus 2021-I

**1. COURSE**

CS366. Robotics (Elective)

**2. GENERAL INFORMATION**

- 2.1 Credits : 4  
2.2 Theory Hours : 2 (Weekly)  
2.3 Practice Hours : 4 (Weekly)  
2.4 Duration of the period : 16 weeks  
2.5 Type of course : Elective  
2.6 Modality : Face to face  
2.7 Prerequisites : CS262. Machine learning. (7<sup>th</sup> Sem)

**3. PROFESSORS**

Meetings after coordination with the professor

**4. INTRODUCTION TO THE COURSE**

That the student knows and understands the concepts and fundamental principles of control, road planning and the definition of strategies in robotics as well as concepts of robotic perception in a way that understands the potential of robotic systems

**5. GOALS**

- Synthesize the potential and limitations of the state-of-the-art of today's robotic systems.
- Implement Simple Motion Planning Algorithms.
- Explain the uncertainties associated with sensors and how to treat them.
- Designing a Simple Control Architecture.
- Describes several navigation strategies
- Describe the importance of recognizing images and objects in intelligent systems
- Outline the main techniques of object recognition
- Describe the different characteristics of the technologies used in perception

**6. COMPETENCES**

- a) An ability to apply knowledge of mathematics, science. (**Usage**)
- b) An ability to design and conduct experiments, as well as to analyze and interpret data. (**Usage**)
- c) An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. (**Usage**)
- d) An ability to function on multidisciplinary teams. (**Usage**)
- g) The broad education necessary to understand the impact of computing solutions in a global, economic, environmental, and societal context. (**Usage**)
- i) An ability to use the techniques, skills, and modern computing tools necessary for computing practice. (**Usage**)
- l) Develop principles research in the area of computing with levels of international competitiveness. (**Usage**)
- p) Improve the conditions of society by putting technology at the service of the human being. (**Usage**)

## 7. SPECIFIC COMPETENCES

- a51) Apply mathematics in robotics projects.
  - b1) Apply computational thinking effectively to the solution of everyday problems
  - b2) Evaluate different proposals for computational thinking for the same problem.
  - b3) Apply robotics as a means to develop computational thinking.
  - b25) Analyze and understand the context of a problem to solve it through robotics.
  - c23) Design a robotic-based solution to a specific problem.
  - d9) Analyze the strengths and weaknesses of a team to build an efficient and ethical solution to a problem.
  - f28) Apply team leadership tools such as: effective communication, emotional intelligence, time management, decision making, creativity and innovation, mentoring.
  - g9) Analyze the impact of automation produced by robotics on the creation and transformation of existing jobs.
  - i2) Use programming languages and environments that allow the implementation and debugging of solutions.
  - l4) Investigate new solutions to existing problems based on robotics
- )

## 8. TOPICS

| Unit 1: Robotics (5)  |  |
|---|--|
| Competences Expected: a,b   |  |
| Topics  | Learning Outcomes  |
| <ul style="list-style-type: none"> <li>• Overview: problems and progress               <ul style="list-style-type: none"> <li>– State-of-the-art robot systems, including their sensors and an overview of their sensor processing</li> <li>– Robot control architectures, e.g., deliberative vs. reactive control and Braitenberg vehicles</li> <li>– World modeling and world models</li> <li>– Inherent uncertainty in sensing and in control</li> </ul> </li> <li>• Configuration space and environmental maps</li> </ul> | <ul style="list-style-type: none"> <li>• List capabilities and limitations of today’s state-of-the-art robot systems, including their sensors and the crucial sensor processing that informs those systems [Familiarity]</li> <li>• Integrate sensors, actuators, and software into a robot designed to undertake some task [Usage]</li> </ul> |
| Readings : [Siegwart04], [Trun05], [Stone00]  |  |

| Unit 2: Robotics (15)  |   |
|--|---|
| Competences Expected: a,b,i,h  |   |
| Topics   | Learning Outcomes   |
| <ul style="list-style-type: none"> <li>• Interpreting uncertain sensor data</li> <li>• Localizing and mapping</li> </ul> | <ul style="list-style-type: none"> <li>• Program a robot to accomplish simple tasks using deliberative, reactive, and/or hybrid control architectures [Usage]</li> <li>• Implement fundamental motion planning algorithms within a robot configuration space [Usage]</li> </ul> |
| Readings : [Siegwart04], [Trun05]  |   |

|   |   |
|---|---|
| <b>Unit 3: Robotics (20)</b>  |   |
| <b>Competences Expected: h,i</b>  |   |
| <b>Topics</b>   | <b>Learning Outcomes</b>  |
| <ul style="list-style-type: none"> <li>• Navigation and control</li> <li>• Motion planning</li> </ul> | <ul style="list-style-type: none"> <li>• Characterize the uncertainties associated with common robot sensors and actuators; articulate strategies for mitigating these uncertainties [Usage]</li> <li>• List the differences among robots' representations of their external environment, including their strengths and shortcomings [Usage]</li> </ul> |
| <b>Readings : [Siegwart04]</b>  |   |

|  |   |
|--|---|
| <b>Unit 4: Perception and Computer Vision (10)</b>   |   |
| <b>Competences Expected: a,b,c,f</b>   |   |
| <b>Topics</b>  | <b>Learning Outcomes</b>  |
| <ul style="list-style-type: none"> <li>• Computer vision <ul style="list-style-type: none"> <li>– Image acquisition, representation, processing and properties</li> <li>– Shape representation, object recognition and segmentation</li> <li>– Motion analysis</li> </ul> </li> <li>• Modularity in recognition</li> </ul> | <ul style="list-style-type: none"> <li>• Summarize the importance of image and object recognition in AI and indicate several significant applications of this technology [Usage]</li> <li>• Implement 2d object recognition based on contour and/or region-based shape representations [Usage]</li> </ul> |
| <b>Readings : [Sonka07], [Gonzales07]</b>  |   |

|   |   |
|---|---|
| <b>Unit 5: Robotics (10)</b>  |   |
| <b>Competences Expected: a,b,i,h</b>  |   |
| <b>Topics</b>   | <b>Learning Outcomes</b>  |
| <ul style="list-style-type: none"> <li>• Multiple-robot coordination</li> </ul> | <ul style="list-style-type: none"> <li>• Compare and contrast at least three strategies for robot navigation within known and/or unknown environments, including their strengths and shortcomings [Familiarity]</li> <li>• Describe at least one approach for coordinating the actions and sensing of several robots to accomplish a single task [Familiarity]</li> </ul> |
| <b>Readings : [Stone00]</b>   |   |

## 9. WORKPLAN

### 9.1 Methodology

Individual and team participation is encouraged to present their ideas, motivating them with additional points in the different stages of the course evaluation.

### 9.2 Theory Sessions

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

### 9.3 Practical Sessions

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

**10. EVALUATION SYSTEM**
